Alaska Power Company		
RULES AND REGULATIONS		
1. General		
1.1 Preface		
<p>Alaska Power Company (hereinafter called "the Company"), a wholly owned subsidiary of Alaska Power & Telephone has developed these Rules and Regulations to assist customers, the electrical and building trades, and the employees and representatives of the Company in applying and administering a uniform set of service standards. These Rules and Regulations are designed to insure equitable service to all customers without prejudice.</p>		
1.2 Adoption		
<p>These Rules and Regulations have been adopted by the Company in compliance with the Company's Articles of Incorporation and Bylaws and in accordance with requirements of federal, state and other bodies having jurisdiction.</p> <p>A copy of this tariff, complete with presently effective charges, rules, and regulations, is on file for inspection on request by any member of the general public during regular business hours at all of the offices of the Company. Please see Company directory (sheet 10).</p>		
1.3 Definitions		
<p>The following terms, wherever used in any of these service policies, the Company's rate schedules, and in any application or agreement for electrical service, shall have the following meaning unless otherwise clearly stated:</p>		
Pursuant to Order No.1 of Docket U-94-5		Effective: June 17, 1994
Issued by: Alaska Power Company  By: Howard Garner Title: Executive Vice President		

<u>Original</u> Cancelling:	Sheet No. 20 Sheet No.	RECEIVED JUN 15 1994 State of Alaska Public Utilities Commission
Alaska Power Company		
<p>Advance-in aid of construction: That sum of money representing the cost of making additions or modifications to electric facilities which the applicant must pay as a condition precedent to the installation or modification of facilities requested, and which is subject to refund to the applicant pursuant to prescribed terms and conditions.</p> <p>Applicant: A person, including a corporation, partnership, association, and governmental unit or agency thereof, who requests electric service or the extension of electric facilities under Section 7 of these rules and regulations, and who may be synonymous, as circumstances permit, with "subdivider," "developer," "builder," "owner," "contractor," and similar terms associated with the improvement and development of real property and the construction of buildings and related improvements and their heirs, successors, and assigns of the applicant.</p> <p>Billing Period: An interval of approximately one month between successive meter reading dates as established by the Company, except for beginning or final billing periods.</p> <p>Company: Alaska Power Company</p> <p>Commercial Service: Activities of a nature requiring a business license, or whose profits and expenses are shown against Federal Income Taxes will be classified as commercial. If the activity cannot be separately metered and takes place in a residence, and its conduct requires more than 25% of the premise's square footage, energy, or demand use; then the entire service will be considered commercial. A master meter or common facility metering serving a multi-unit residential building of more than four</p>		
Pursuant to Order No. 1 of Docket U-94-5		Effective: June 17, 1994
Issued by: Alaska Power Company  By: Howard Garner Title: Executive Vice President		

<u>Original</u> Cancelling:	Sheet No. 21 Sheet No.	RECEIVED JUN 15 1994 State of Alaska Public Utilities Commission
Alaska Power Company		
<p>units will be considered commercial.</p> <p>Contribution-in-Aid of Construction: That sum of money representing the cost of making additions or modifications to electric facilities which the applicant must pay as a condition precedent to the installation or modification of facilities requested, and which becomes the property of the Company and is not otherwise subject to refund to the contributor.</p> <p>Customer: Any individual, firm or organization who purchases electric service at one location under one rate classification, contract, or schedule.</p> <p>Delinquent: All "past due" amounts and associated finance or late charges, for billing purposes, from one billing cycle which are not received by the Company as of the close of the subsequent billing cycle.</p> <p>Delinquent Account Carrying Charge: The tariffed charge levied by the Company on an account for which payment in full has not been received by the scheduled due date.</p> <p>Demand: The maximum rate of delivery of electric energy during a month, measured in kilowatts (kw) and registered as the highest average rate of energy used over any fifteen minute period during the month.</p> <p>Deposits: That sum of money paid to the Company and retained for a given length of time and returned at the end of the said time, providing all necessary requirements for refund are met.</p>		
Pursuant to Order No.1 of Docket U-94-5		Effective: June 17, 1994
Issued by: Alaska Power Company  By: Howard Garner Title: Executive Vice President

Qualifying Facility: A cogeneration facility or small power production facility as defined in 3 AAC 50.820(11).

Residential Service: The provision of electrical energy for domestic purposes such as space heating, water heating, cooking, clothes drying, and includes service in apartment buildings, mobile home parks, other multi-unit residential buildings and common areas of four or less units, boat harbors, private airplane hangars, and like uses. For circumstances where a residence is classified as a commercial service, see the Commercial Service Definition.

Retail Customer: A person or entity purchasing energy services from rate classes for their own use and do not resell metered energy services to the public. The rule limiting resale of electricity to other parties does not include the sale of electric energy to Electric Vehicle (EV) stations.

N
N
N

Seasonal Service: Service only during specified seasons of the year, such as service to a cannery during the summer.

Secondary Voltage: The voltage for delivery directly to the service entrance of the customer, i.e., the low voltage side of a distribution transformer, or utilization voltage.

Service: The furnishing of electric energy to a given location; the conductors at secondary voltage required to furnish such energy.

Single-Phase Service: Standard service using two energized wires and one neutral.

Street Light: A system, or fixture of such system, for the illumination of streets, alleys, and other public places and areas, or a fixture or fixtures, installed to illuminate private homes and areas.

Subdivision: A tract or parcel of land divided into two or more lots, sites, or other divisions according to applicable law.

RULES AND REGULATIONS

2. Nature of Services Offered

2.1 Electric Service

The Company provides 60 cycle (Hertz) alternating current, either single or three phase, depending upon available circuits. Standard voltages available are 120/208, 120/240, 208, 240, 277/480, and 480, depending upon available circuits. Other secondary voltages may be made available with prior approval of the Company's engineering department. It is the responsibility of the customer to pay for special equipment needed to supply non-standard secondary voltages or regulate voltages closer than standard service provides.

Service is also available at the Company's standard primary distribution and transmission voltages, depending upon available circuits. Standard distribution voltages depending on location are 2400/4160, 7200/12470, 14400/24900 and 19900/34500. Customers receiving service at these voltages will be responsible for furnishing, installing and maintaining all facilities and equipment past the agreed point of delivery, including required circuit breakers, transformers, and line extensions. The Company reserves the right to require the customer to furnish circuit breakers with appropriate protective equipment at the point of delivery

T
T

The Company shall, unless otherwise provided, construct, operate and maintain the entire facilities, whether overhead or underground, necessary to delivery electrical energy to the point of receipt of service by the customer. The point of receipt of service by the customer (unless otherwise provided in this

3. Types of Service

3.1 Permanent

Permanent service installations are as defined in Section 1.3 (Definitions). Charges for construction of permanent facilities will be based on the Service Extension Policies set forth in Section 7 of this tariff. All facilities will be designed and installed in accordance with applicable codes, standards and practices of the industry for the class of service provided. The equipment will be mounted on an applicant's pole, building or other structure on a permanent, non-moveable foundation. The Company reserves the right of final determination of whether a service will be classified permanent.

Where the Company cannot be assured that the customer to be served will be reasonably permanent or where unusual expenditures are necessary to supply service because of, or change in, the location, size or character of the applicant's or customer's installation, facilities will be constructed only when the applicant or customer makes an adequate contribution toward the cost of such facilities, or guarantees continued payment of bill for electric service, or makes other satisfactory arrangements which would be sufficient to warrant the Company's undertaking the investment and expense involved.

3.2 Temporary

Temporary service installations are as defined in Section 1.3 (Definitions). The applicant will be required to pay the cost of the connection and removal

<u>Original</u> Cancelling:	Sheet No. 33 Sheet No.	RECEIVED JUN 15 1994 State of Alaska Public Utilities Commission
Alaska Power Company		
<p>of the equipment necessary to serve. In addition, where the duration of temporary service is to be less than one month, the applicant will be required to advance a sum of money equal to the estimated bill for service. Where the duration of temporary service is to exceed one month, the applicant will be required to meet the deposit requirements set out in Section 6.</p> <p>If, during the term of the temporary service, the character of a temporary customer's operations changes or it appears that the duration of the service may be substantially longer than stated in the application, the Company shall re-classify the service as permanent and will apply the deposit and line extension rules as outlined in this tariff.</p> <p>The Company shall not allow a temporary service connection to continue longer than 12 months unless for good cause shown the Company has approved an extension of time for temporary service or unless application for permanent service has been made by the customer.</p> <p>The installation and equipment will comply with applicable technical and safety standards, practices and codes to protect the customer, the general public and the Company's employees. Such codes include the National Electric Code, the National Electric Safety Code, and City and Borough requirements.</p> <p>3.3 Seasonal</p> <p>The Company may provide seasonal electrical service to customer premises that are utilized on a seasonal basis.</p>		
Pursuant to Order No.1 of Docket U-94-5		Effective: June 17, 1994

4. Interconnection Standards

4.1 Interconnection with Qualified Cogenerators and Small Power Producers, see Rule 6.13.

The Company may not interconnect with a qualifying facility unless the following safety standards are met:

(1) The facility must conform to that edition of the National Electrical Code as adopted under AS18.60.580.

(2) The facility must provide a means of disconnecting with provision for padlocking in the open position by the Company. This device, or a supplementary device, must be capable of switching under full load conditions and must be clearly labeled and accessible to Company personnel.

(3) The facility must provide overcurrent protection of adequate interrupting capacity and design, in conformance with the Company's overcurrent practices for similar feeders and loads, for the feeder serving as the intertie to the utility system. Automatic reclosing by the qualifying facility is prohibited unless the facility has received prior written approval from the utility as not posing a threat to life or property.

(4) The Company will provide overcurrent protection in accordance with the Company's overcurrent practices for similar feeders and loads for the feeder extension serving as the intertie to a qualifying facility.

RULES AND REGULATIONS		
5. Technical Provisions and Standards of Service		
5.1 Service Classification <p>The intended use of electricity will determine whether a service is classified as residential or commercial based on the definitions of residential and commercial service set forth in Section 1.3. Classification of commercial and residential services to appropriate rate schedules is stipulated by the size and nature of service rendered as provided in the applicable rate schedules. Services with anticipated installed capacity of greater than 500 kw may require a special contract.</p> 5.2 Determination of Use <p>The quantity of electrical energy and/or electrical demand shall be determined by the registration of the electric meters provided by the Company, except that:</p> <ol style="list-style-type: none"> 1. Where the load is such that the amount of electrical energy consumed is fixed by the type of service, the Company may elect not to meter the service and to bill the customer a fixed amount as determined by the charges under the appropriate rate schedule. 2. Where temporary service is rendered under conditions making metering impractical, the amount of energy consumed may be estimated and billed accordingly. 5.3 Billing Demand <p>The billing demand shall be the highest of metered or</p>

Issued by: Alaska Power Company  By: Howard Garner Title: Executive Vice President		

<p><u>Original</u></p> <p>Cancelling:</p>	<p>Sheet No. 39</p> <p>Sheet No.</p>	<p style="text-align: center;">RECEIVED</p> <p style="text-align: center;">JUN 15 1994</p> <p style="text-align: center;">State of Alaska Public Utilities Commission</p>
<p style="text-align: center;">Alaska Power Company</p>		

contracted demand, after adjustment for low power factor, if applicable.

Metered demand shall be as defined in Section 1.3. Contracted demand will be established for service rendered under special agreement.

5.4 Phase Unbalance

Current unbalance in phase wires of services, except for three-phase, four-wire delta services, shall not exceed ten percent (10%) of the current which would be required at maximum load under balanced conditions. The customer will take corrective steps to return unbalance to 10% or less.

5.5 Protective Equipment

It is the Customer's responsibility to provide suitable protective equipment for the equipment, data, operations, work and property under it's control from (a) high and low voltage, (b) surges, harmonics, and transients in voltage, and (c) overcurrent. Particular care must be exercised in determining suitable protective equipment for sensitive electronic equipment such as, but not limited to, computers, data storage equipment and other electronic equipment. Additionally, if three-phase equipment is installed, it is the customer's responsibility to protect such equipment against single-phase operation and under-and-over voltage conditions. Minimum protective devices considered necessary for motor protection are:

1. Line Starting Protection: Any motor which, in starting, might be damaged by the full line voltage requires some type of protective device to disconnect it from the line during interruptions in service, thus protecting the motor when service is restored.

Pursuant to Order No.1
of Docket U-94-5

Effective: June 17, 1994

Issued by: Alaska Power Company

By:  Howard Garner Title: Executive Vice President

<u>Original</u> Cancelling:	Sheet No. 40 Sheet No.	RECEIVED JUN 15 1994 State of Alaska Public Utilities Commission
Alaska Power Company		
<p>Such a device should also be equipped with a time delay mechanism so that the motor will not be disconnected by momentary fluctuations in voltage.</p> <p>2. Overload Protection: Since the intense heat caused by overload may seriously damage the motor, the customer should install a device that will disconnect the motor if overload occurs. Fuses, thermal relays or circuit breakers which are specifically designed to operate when excessive current occurs, are the devices used for this purpose. Where the customer receives three-phase service, such protective devices should be connected in all phases.</p> <p>3. Single-Phasing Protection: Where the customer receives three-phase service, a relay should be installed which will disconnect the motor from the lines in the event one phase of the line becomes open.</p> <p>4. Reverse-Phasing Protection: For three-phase installations of electric cranes, hoists, elevators, pumps and the like, the customer should install relays which will disconnect the motor from the line in the event of phase reversal.</p> <p>5.6 Inspection</p> <p>The customer is responsible for installing and maintaining his electrical wiring and equipment in accordance with applicable local, state and national electric and building codes as evidenced by certificates of approval from the appropriate inspection body.</p> <p>5.7 Addition of Load</p> <p>Any customer shall give the Company reasonable</p>

notice, in writing, of any plans to increase a given load past the capacity of the Company's equipment installed to serve that particular location. The Company may require the advance payment of contributions or advances to construction and the execution of related documents as outlined in Section 7 of this tariff prior to the commencement of any installation of added or enlarged facilities. If the customer fails to notify the Company of additional loads and such additional load damages the Company's equipment, the customer is liable for such damages and repairs or replacement of damaged equipment.

5.8 Undesirable Load Characteristics

The Company may refuse service to, or remove service from, any installation which, in the judgement of the Company, will adversely affect the operation of the Company's system or its service to other customers.

The Company reserves the right to immediately disconnect service when the customer's load makes it impossible for the Company to provide service according to the voltage and frequency standards established within Sections 5.4 and 5.9.

In less serious situations, removal of service will occur only after delivery of a shut-off notice to the customer's service location specifying the problem and scheduling disconnection 15 days later if the customer has not corrected the situation or otherwise adequately responded to the shut-off notice. Where immediate correction is not possible, the customer's response shall include arrangements made for repair or replacement of equipment. A completion date will then be established and the disconnection will be postponed until the day following the agreed completion date.

5.9 Non-Standard Tolerances

Where the customer requires a degree of regulation of the characteristics of the electrical service greater than that normally furnished by the Company, the customer shall be responsible for obtaining, installing and maintaining the required regulating equipment. Normal tolerance is defined according to 3 AAC 52.460(a) as a standard frequency of 60 Hertz, such frequency being held within plus or minus two percent. Cumulative error registered by an electric clock may not exceed 90 seconds over a 24 hour period.

5.10 Unauthorized Attachments

Written permission from the Company is required prior to the attachment of any equipment or material of any description to any Company property including poles, guy wires, equipment or structures. Any unauthorized attachment is subject to removal at any time without notice.

RULES AND REGULATIONS

6. Service Conditions

6.1 Application for Service

Application for normal service connections will be made using the Company's standard power service order form and do not require a customer signature. Special contracts will require a signature from the customer. In special cases for large industrial or commercial customers, a special contract may be written and shall contain such provisions and stipulations as may be necessary or desirable to protect the interest of both the Company and the customer. All fees shall be paid at the time of the service application or prior to construction. Acceptance of service, with or without a signed application or contract, shall be subject to compliance with the terms of the applicable rate schedule or schedules and the customer service policies contained herein in this tariff.

C
C

If an application for service is made by two or more individuals, the Company has the right to collect the full amount owed from any one of the applicants.

6.2 Connection and Disconnection

All orders for connection or disconnection of electric service must be executed by the customer, or by a customer's attorney-in-fact or duly authorized agent, by an officer or duly authorized agent of an organization, association, corporation, political body or governmental agency, or by either applicant in the case of a joint application. The applicant is

Alaska Power Company		

order to receive a refund of the deposit.

On all deposits over \$100 the Company will pay interest in accordance with AS 45.45.010.

Deposits will be refunded with accrued interest within (35) days after the earlier of:

- (1) Twelve months continuous service if the customer has not been past due in the payment of electric utility bills more than twice, has not been delinquent in the last six months, and is not past due at review; or
- (2) Termination of service, to the extent the amount held, plus accrued interest, exceeds any balance due the Company for electric service and finance charges for that account.

6.7 Applicable Rate

When a customer applies for service, the Company will determine the appropriate initial class of service for the customer based on estimated power use at the location. If alternate classes of service are available to the customer, Company personnel will advise that customer of the most economical class of service available and assist the customer in making an informed choice in service offerings.

T
|
|
T

At the Company's discretion or by customer request, a customer's service may be reviewed to establish if the customer's current rate schedule is still applicable based on the prior 12 months of usage. If after review the customer qualifies for a different rate schedule, the Company may change the customer's service effective after the next regular meter reading. The Company shall not be required to make more than one change in rate schedule for any customer within one year unless a new schedule is made effective or the customer's operating conditions have changed permanently so as to warrant a change in schedule.

6.8 Resale of Electricity

A customer shall not sell to others any of the electric energy furnished by the Company unless the customer holds a valid Certificate of Public Convenience and Necessity issued by the Regulatory Commission of Alaska for retail distribution of electric energy. No service will be supplied through a master meter for sub-metering for resale. This rule does not prohibit a customer from furnishing unmetered electric service to rental units constructed prior to December 31, 1982 where the cost of electricity is included in the rental charge. Notwithstanding the foregoing, electric vehicle charging stations are not subject to restrictions related to the resale of electric service.

T
T

T

6.9 Protection of Company's Property

The customer shall provide space for, and shall be responsible for, the safe-keeping of the Company's meter installation on their premises, including: meters, wires, and other metering facilities installed by and remaining the property of the Company. In the event of loss or damage to Company property due to the negligence of the customer, the Company may collect from the customer the cost of repairs or replacement.

6.10 Authorized Breaking of Meter Seal

Under certain circumstances, a customer may request permission to break a meter seal to facilitate disconnection for electrical work. Such requests should be addressed to the Company. A fee will be charged for resealing the equipment.

6.11 Tampering with Company Property

Unauthorized tampering with meters and other facilities of the Company is a civil offense under

Alaska Power Company

(c) Upon approval of the interconnection by the Company, the customer shall agree to pay the cost of any special metering equipment or circuit modifications determined by the Company as necessary to accomplish the interconnection.

(d) See Section 4 of this tariff for safety standards regarding the interconnection of qualifying facilities to the Company's system.

Fossil Fuel Standby Generation

The Company will not permit the interconnection and operation by customers of fossil fuel standby generation facilities, such as diesel or gasoline engine driven generators, with its integrated distribution system under any circumstances. Fossil fuel standby generators shall be connected to the customer's load only through a double throw switch that will prevent parallel operation with the Company's distribution system.

6.14 Customer Power Outage

If a power outage occurs, the customer should attempt to determine if fuses have been blown, breakers tripped, or equipment is at fault before calling the Company. If the customer determines the fault to be the Company's equipment, the Company will send a serviceman out to investigate the reported outage. If the cause of the outage is determined to be the failure of the Company's equipment, the Company will correct the problem and restore service as soon as possible. However, if it is determined that the customer's equipment is at fault, a charge may be made for the serviceman's visit to the customer's service location (See Schedule of Fees and Charges).

STATE OF ALASKA
REGULATORY COMMISSION OF ALASKA

Alaska Power Company

RULES AND REGULATIONS

7. Service Extensions

7.1 General Provisions

The Company will provide, upon written application, service to any reasonably accessible location within the Company's service area under the following guidelines.

7.2 Standard Service Extensions to Active Location

Any permanent service extension whether single-phase or three-phase, overhead or underground, primary or secondary will be constructed by the Company within the following parameters.

A. Project construction shall not be initiated before the execution of a written estimate agreement between the property owner and the Company detailing the estimated share of the costs to be borne by the Customer requesting service. Also documented will be the terms and conditions of payment, and the estimated date of completion. This document is to be signed and agreed to by both parties to which it refers.

B. The Company shall furnish, construct and provide materials, connections and labor amounting up to, but not to exceed the value of \$3,000.00, as a "New Service Credit" to any new customer requesting a service extension; provided the aforementioned requirements are met. All costs (agreed to per Rule 7.2A) incurred beyond the New Service Credit are to be paid by the Customer as an Advance-in-Aid of Construction.

Alaska Power Company		
<p>7.3 Customer Advances-in-Aid of Construction</p> <p>The customer shall deposit with the Company the estimated cost of construction for any service extension, equal to that amount which exceeds the New Service Credit. The aforementioned amount shall be considered an "Advance-in-Aid of Construction". Should the actual costs for commercial or non-standard residential service extensions exceed the written estimate, agreed to by both parties, no charges in excess of the written estimate plus 10% may be collected by the Company unless such additional charges are the result of additional work requested or caused by the customer subsequent to the initial written estimate. Additional costs that were not caused by the customer, in excess of the 110% of the initial written estimate, will be borne by the Company as a cost of doing business.</p> <p>7.4 Refunds or Re-payments of Customer Advances for Construction</p> <p>Customer Advances-in-Aid of Construction shall be refunded to customers by crediting against each month's bill for electric service rendered to said premises Thirty (30) Percent of the amount of such monthly bill until said deposit, without interest, is wholly repaid; provided, however, such credits shall in no event be allowed for more than five consecutive years from the date the extension is completed. Advances-in-Aid of Construction are non-transferable to other parties, unless assigned in accordance with Rule 7.17. Upon discontinuance of electrical service, repayment will cease and the outstanding balance of the Customer Advance-in-Aid of Construction will be treated as a Contribution-in-Aid of Construction.</p>

Issued by: Alaska Power Company  By: Howard Garner Title: Executive Vice President		

<u>1st Revision</u> Cancelling: <u>Original</u>	Sheet No. <u>58</u> Sheet No. _____	RECEIVED FEB 09 2007 STATE OF ALASKA REGULATORY COMMISSION OF ALASKA
Alaska Power Company		

7.5 Estimation of Service Extension Costs

A. The Company tariffed rate used in determining standard residential service extension costs are based upon historical actual construction costs including, labor, hardware, poles, wire & transformers.

The Customer shall, in advance of any construction, deposit with the Company the total of the calculation, less the New Service Credit of \$3,000.00, as a Customer Advance-in-Aid of Construction. The Customer advance shall be repaid to the party originally advancing the funds in accordance with Rule 7.4. | R

B. In determining the costs for Non-Standard Residential and Commercial service extensions an estimate prepared by the Company using historical costs for similar types of construction will be used. The customer shall in advance of any construction, deposit with the Company the total amount of the estimate less the New Service Credit of \$3,000.00 as a Customer Advance-in-Aid of Construction. If the actual cost of the service extension, less the New Service Credit, is less than the amount deposited the excess will be refunded in accordance with Rule 7.3. | R

7.6 Buy in to Existing Service Extensions

At least annually, the Company will recompute all outstanding Advances-in-Aid of Construction which have an

TA 749-2	Effective: March 26, 2007

<u>Original</u> Cancelling:	Sheet No. 59 Sheet No.	<p style="text-align: center;">RECEIVED</p> <p style="text-align: center;">JUN 15 1994</p> <p style="text-align: center;">State of Alaska Public Utilities Commission</p>
Alaska Power Company		
<p>unpaid balance to reflect new Customers which have connected to that service extension. Each new Customer of said line extension will be charged a prorated share of the original line extension cost. The Company will refund and credit, as appropriate, any subsequent advances for construction to those Customers who previously advanced funds for connection to the completed line extension. No persons however will be eligible to receive a refund and/or credit, resulting from a line extension advance, subsequent to the lapse of 5 years from the date of initial connection to said line extension. The Company will not receive funds greater than those which were originally associated with the initial costs of the extension. Nor will any Customer refund exceed the amount of the original Advance-in-Aid of Construction.</p> <p>Upon request the Company will make available a report or the computations that support any "Buy in's" pertaining to any Advances-in-Aid that were made in conjunction with a service extension that has not been fully repaid.</p> <p>If a new customer connects to an existing service extension which has not been fully repaid or lapsed (five years after initial connection) the Company will collect a pro-rated Buy in Fee which will be refunded to the existing customers connected to the service extension. The new customer will be required to pay their pro-rated portion of the cost of the service extension to the pole their service or new service extension connects to so that all customers using the same poles will make the same Advance-in-Aid of Construction. This Buy in charge will be treated as an Advance-in-Aid of Construction and will be refunded to the customer paying the buy in charge, in accordance with Rule 7.4.</p>		
Pursuant to Order No. 1 of Docket U-94-5		Effective: June 17, 1994
Issued by: Alaska Power Company  By: Howard Garner Title: Executive Vice President		

<u>Original</u> Sheet No. 60 Cancelling: Sheet No.	RECEIVED JUN 15 1994 State of Alaska Public Utilities Commission
Alaska Power Company	

For Example:

If there are two existing customers on pole #5 and one on pole #3, a new customer at pole #3 would pay 1/4 of the outstanding balance Advance-in-Aid of Construction related to poles #1, #2, and #3 as a Buy in charge. This Buy in charge would then be refunded to the three original customers reducing their respective Advances-in-Aid and creating a new Advance-in-Aid of Construction which would pertain to the new customer at pole #3.

Sample Buy in Fee Calculation

	20%	40%	60%	80%	100%
existing pole	X-----X-----X-----X-----X-----X	new pole	new pole	new pole	new pole
	1	2	3	4	5

If the outstanding balance for the three original customers advances totaled \$5000. The customer at pole #3 had a advance of \$1000 and the customer at pole #5 each had a advance of \$2000. The average outstanding balance per pole would be \$1000. A new customer connecting at pole #3 would pay \$750, which equals the average advance per pole times the number of poles used divided by the number of customers utilizing those poles ($\$1000 * 3/4$). The \$750 would be used by the company to refund \$250 to each of the three existing customers.

7.7 Construction of Subdivision Service Extensions and/or Idle Facilities

A. Any person requesting a service extension to an inactive service location or subdivision shall make a Contribution-in-Aid of Construction prior to commencement

RULES AND REGULATIONS

8. Service Connections

8.1 General Requirements

The Company's engineering staff will assist an applicant with the specifications to be followed in designing and installing the applicant's service entrance. The company's Electric Service Requirements, including examples of the Minimum Construction and Grounding Standards can be found on the company's website at <https://www.aptalaska.com/> under the "Power" dropdown tab.

The Company will furnish the meter and connect its distribution lines with the customer's service entrance. All inside wiring, the service entrance, meter base, breaker box, service switch and appurtenances shall be furnished by the customer.

8.2 Point of Delivery

The point of delivery is that point on the customer's premises, or other agreed point, where the Company terminates its electrical service conductors with connection to the customer's wires. Point of delivery will be on a mutually acceptable location pre-arranged with the Company's Engineering Department, as follows:

(1) For an overhead system--The point of connections by splice or tap, of the utility's supply conductors and the customer's service entrance conductors; such point being external to the customer's building or other structure.

(2) For an underground system--The service lugs of a meter enclosure or other suitable terminal box mounted external to the customer's building or other structure to which the utility's supply conductors are connected.

The rates of the Company are based upon the supply of service to the entire premises through a single delivery and metering point. Separate supply for the same customer at other points will generally be separately metered and billed. See Section 9.10 of this tariff for combined billing regulations.

<p>8.3 Meter Locations</p> <p>Meters and associated service switches must be installed in a mutually agreed location where the meters will be readily and safely accessible for installation, reading, testing, and inspection and where such activities will cause the least interference and inconvenience to the customer. The meter must be accessible to Company employees from the outside of the applicant's building, unless written permission is given by the Company for any other location. The customer shall provide the meter location without cost to the Company.</p> <p>Customer equipment, including meter sockets, shall not be installed on Company property, including Company poles, unless specific written permission is given by the Company.</p> <p>Meter sockets shall be mounted external to a building wall, i.e., they should not be flush mounted or built into a wall such that the conduit system feeding the meter is concealed inside a building wall.</p> <p>Prior to energizing multi-meter installations such as apartments, condominiums, zero-lot line residences, etc., each location that the meters serve must be clearly identified by one inch letters on each meter base. If the numbering system changes, the property owner is responsible for updating the labeling and notifying the Company. When the meter is installed, the owner or his authorized representative must be present to physically verify that each meter serves the location designated by the labeling.</p> <p>8.4 Primary Service</p> <p>Where primary service is supplied, the customer, at the customer's expense, shall furnish, install, and maintain on his premises such switches, transformers,</p>

RULES AND REGULATIONS

9. Billing and Collection

9.1 Rates

The Company provides electricity for sale under retail rate schedules designed to recover sufficient revenues from each class of customers to generally cover the costs to service that class. All services will be provided under either these retail rate schedules or under a special contract.

9.2 Bills Effectively Rendered

Service is billed on a monthly basis.

Bills for electric service will be considered rendered when:

- (a) The bill is delivered to the customer personally; or
- (b) The bill is mailed to the address on record or the last known address of the customer. The statement bill date is considered the day the bill was rendered. This date may not vary from the postmark date by more than 3 working days. or
- (c) The bill or notification of the bill available online is sent electronically by email, text message or other means provided by the customer.

Failure to receive a bill or notice from the Company will not prevent the bills from becoming past due or delinquent or excuse the customer's responsibility for payment.

9.3 Bills Due

Bills of the Company are due when rendered and are payable at the offices of the Company or such other pay stations as the Company may designate. Any bill not paid within twenty-five (25) days after the date rendered will be considered past due and subject to a late charge and finance charge. All past due amounts and associated late charges from one billing cycle which are not received by the Company as of the close of the following billing cycle will be considered delinquent and subject the account to disconnection of service.

9.4 Deferred Payment Agreements

For any residential customer who demonstrates that economic hardship prevents payment in full of a delinquent bill, the Company will not refuse to restore or continue service unless the customer refuses to agree to or comply with a deferred payment plan meeting the following requirements:

- (1) The customer agrees to pay one-third or less, at the option of the Company, of the outstanding bill at the time the deferred payment agreement is signed. If one-third of the outstanding bill is more than \$50.00 then the minimum down payment prior to entering into a payment agreement will be \$50.00 or 10% of the outstanding balance which ever is greater. The minimum monthly payment on the principal balance due as listed on the payment agreement form is \$50.00.
- (2) The customer agrees to pay the remaining outstanding balance in installments over a period of not less than three months and not more than six months, at the Company's option. Such period may be shorter than three months only at the customer's option.
- (3) The customer agrees to pay all future monthly charges at the time they are due in accordance with the effective billing and collection tariff of the Company in addition to the monthly principal payment on the outstanding balance as agreed upon in the payment agreement.
- (4) In the event this payment agreement is placed into the hands of an attorney or collection agency for collection, or is collected by collection suit, bankruptcy, probate, or any other equitable proceedings, including appeals, then the customer promises to pay all costs and expenses incurred by Alaska Power & Telephone including reasonable attorney fees, necessary to enforce the terms of this agreement.

N

Deferred payment agreements may be entered into with nonresidential customers at the Company's option.

In determining a reasonable deferred payment schedule, the Company and the customer shall consider the following conditions:

- (1) Size of the delinquent account;
- (2) Customer's ability to pay;
- (3) Customer's payment history;
- (4) Length of time the debt has been outstanding;
- (5) Circumstances which resulted in the outstanding debt; and
- (6) Any other relevant factors related to the circumstances of the customer.

The Company will offer comparable terms and conditions to customers with similar payment

SEP 20 2023

STATE OF ALASKA
 REGULATORY COMMISSION OF ALASKA

Alaska Power Company

Where the Company has prior knowledge that a residence is occupied by a person seriously ill, elderly, handicapped or dependent on life support systems, the Company will provide the notice required above at least 30 days prior to the schedule date of disconnection. In any case in which the Company is notified after issuance of a termination notice that a customer's residence is occupied by a person seriously ill, elderly, handicapped, or dependent on life support systems, the Company will extend the disconnection date by 15 days and notify the customer of the extension.

Not less than three working days prior to disconnection, the Company shall attempt personal contact with the customer either by telephone or visit of an authorized representative to the premise. If by telephone, the Company will attempt to make contact no less than three times at various periods in the day or make other reasonable attempts to contact the customer. The Company will keep records showing the time, the person making the attempt, and the outcome. If by visit to the premise, the Company's authorized representative will hand deliver a "Shut-Off-Notice" to the customer or, if no personal contact is possible, leave the notice in a prominent place. If the premises is 25 or more miles from the nearest location from which the utility delivers notices and if telephone contact cannot be made due to the customer having no telephone or the company can find no valid telephone number for this customer, then a first class, postage-prepaid letter may serve as an alternative to a hand-delivered "Shut Off" notice. This notice must be mailed no less than five working days before the date scheduled for disconnection.

The "Shut-Off-Notice" will provide the customer with the following information:

- (1) The name and address of the customer and the service address, if different;
- (2) A concise statement of the reasons for the proposed disconnection of service;
- (3) The date on or after which service will be disconnected;
- (4) The Company's business office telephone number and after hours telephone number and the address of the Company where the customer may pay the delinquent bill, enter into a deferred payment agreement, or

(4) The customer disputes the amount due on the delinquent account, complies with the Company's tariffed rules on customer disputes, and the dispute remains under investigation by the Company or by the Alaska Public Utilities Commission. However, a customer shall pay any undisputed amounts, and the Company may proceed to disconnect service in accordance with the above provisions for failure to pay any undisputed amounts; or

(5) The customer is unable to pay the full delinquent amount due, qualifies under the Company's tariffed eligibility requirements for deferred payment agreements, and is in compliance with a signed, or is in the process of negotiating a deferred payment agreement.

The Company may remove any or all of its property installed on a customer's premises upon disconnection of service.

The Company will restore service within three working days of correction of the conditions which resulted in the disconnection. **Correction includes execution of a deferred payment agreement.** The Company may charge a reconnection charge as stated in the Schedule of Fees and Charges and if service is restored at the customer's request during a period other than regular working hours, the customer may be required to pay the stated after-hours charge for reconnection.

The Company will maintain a record of each disconnection of service for two years, including the reason for the disconnection.

9.6 Non-recurring Late Charge and Recurring Finance Charge

A non-recurring Late Charge will be assessed on all accounts that have	L3/T
a past due balance. In addition, a Finance Charge	L3/T
will be assessed monthly on past due balances.	L3/T

L3 - The rate for the non-recurring Late Charge relocated to Sheet 102.

not to exceed six months, or the period during which the most recent customer of record received service through the meter, whichever period is less.

If a residential meter is tested and found to have under-registered the amount of power delivered, the Company will not charge a customer for the underbillings unless there is evidence of meter or electric service tampering by the customer.

If the meter of a Commercial, or Bulk power customer is tested and found to have under-registered the amount of energy or power delivered, the Company will charge the customer for underbillings for usage for no more than four previous months unless there is evidence of meter or electric service tampering by the customer.

The Company will test a meter upon request of a customer and may charge the customer for the meter test per the Company's Schedule of Fees and Charges. However, the Company will not charge for the meter test if the meter is found to over or under-register by more than two percent and there is no evidence of meter or electric service tampering by the customer.

9.12 Change of Occupancy

Bills are rendered in the name of the person or entity shown in the Company's records as the party responsible for electric consumption at the specified location. Any change in occupancy, ownership or legal responsibility must be reported either in person or by written notice to the Company within a reasonable time prior to such change. The customer whose name is on record for that service will remain responsible for all charges until such notice of change is received by the Company. The new customer assuming account responsibility is to apply for service under Section 6.

9.13 Between Renters Agreement

Owners or operators of rental properties may sign a Between Renters Agreement for the automatic continuance of service in the owner's or operator's name during periods of vacancy between renters. During such periods of vacancy, the owner or operator will be billed the monthly service charges under the appropriate Rate Schedule. A Connection/Establishment of Service Fee as specified under Section 12, will be assessed for each occurrence and for each unit where service is reverted to the owner or operator. T T T T T

9.14 Disputes - Billing

Whenever a customer has a dispute concerning any bill or service, the customer should request the Company to investigate the grounds for dispute. The Company will respond to the substance of each dispute within the timeframes of Rule 1.8.

If this reply is not satisfactory to the customer and the differences cannot be reconciled by the Company's staff or management, the customer may request assistance from the Regulatory Commission of Alaska, 701 W. 8th Avenue, Suite 300, Anchorage, Alaska 99501-3469.

However the customer shall pay any undisputed amounts, and the Company may proceed to disconnect service in accordance with its disconnection procedures for failure to pay any undisputed amounts.

9.15 Bills Computed to the Kilowatt-hour

Meters without multipliers or constants will be read to the kilowatt-hour of consumption. The resulting bill will be computed to the kilowatt-hour.

9.16 Disclosure of Prior Consumption History

The Company may disclose the prior consumption and/or other relevant information at a particular service address to a new customer or prospective customer at that address for purpose of assisting the new customer in evaluating energy efficiency, etc.

<p>9.17 Levelized Billing (Continued)</p> <p>(4) <u>Adjustments to Monthly Billing Amount</u></p> <p>Alaska Power Company will adjust a customer's levelized billing annually or more frequently if the estimate of the customer's usage or cost varies significantly from the customer's actual usage or cost. The monthly payment may also be adjusted for changes in base rates or COPA (Cost of Power Adjustment) rates.</p> <p>(5) <u>Disputes</u></p> <p>Customers who dispute the correctness of a bill shall notify Alaska Power Company and state reasoning in support of their position. Such notice shall not be sufficient reason to withhold payment of the normal monthly budget payment. Any adjustments will be made in the following billing cycle.</p> <p>(6) <u>Delinquency and Termination</u></p> <p>If a customer participating in the plan fails to pay the budget billing obligation in any month by the due date, the budget payment shall be considered past due and they may be removed from the levelized billing plan. Once the customer is returned to regular billing, the total account balance will be due. Disconnection notification requirements will apply to any delinquent amount as determined on the aging of the actual account balance.</p> <p>If the customer is removed from the Levelized Budget Billing Program, either by Alaska Power Company or at the customer request, the customer will not be eligible to participate in the Levelized program for one (1) year.</p> <p>The customer may terminate this agreement at any time either verbally or in writing. Once the customer leaves the program, the full account balance will be due. If the customer has a credit balance at the time of plan termination and is continuing service with Alaska Power Company, the credit will remain on their account and applied to future billings. If the customer is not continuing service with Alaska Power Company then the credit will be applied to the final bill and any residual credit will be refunded to the customer.</p>

Security Light Service		
AVAILABILITY: This service applies to dusk-to-dawn lighting of private property where 120-volt service is available from existing overhead distribution lines. Such service shall be provided for a term of not less than twelve (12) consecutive months. This service is available in all of the Company's service areas.		
TERMS AND CONDITIONS: Installation will be limited to 100 watt lamps of standard design, as determined by the company. The Company may adopt another or different design to reflect improved technology, lower cost and other relevant considerations. The Company will own and maintain the facilities for supplying security light services utilizing its overhead circuits in accordance with the Company's standards. The Company will furnish the necessary energy, repairs, and maintenance. Repair and maintenance work will be performed by the Company as required during its regularly scheduled working hours. Individual lamps will be replaced after failure as soon as reasonably possible after notification by the customer and subject to the Company's normal operating schedule. Lighting facilities which are damaged by the malicious and/or recurring actions of third parties shall be subject to removal by the Company and/or payment by the customer for such damage. The 100 watt lamps use 600 kwh per year. This will be billed to the customer's account at 50 kwh per month which will be added to the other kwh sold on their monthly bill.		
MONTHLY RATES:		
Using Existing Poles	\$6.28	I
Using An Additional Pole	\$11.36	I
Energy Charge: In accordance with each community's Schedule No. A-1.		
Cost of Power Adjustment: Billing under this schedule will be increased to reflect the amounts by which the weighted average cost of power per kwh sold exceeds the base rate and decreased to reflect the amount by which the weighted average cost of power is less than the base rate in accordance with each community's Schedule No. A-3.		
Power Cost Equalization Program: These rates are eligible for power cost equalization in an amount per kwh identified on each community's Schedule No. A-5.

2 POW Island	\$0.1604	R
3 Gustavus	\$0.2186	R
4 Tok/Dot Lake/Tetlin	\$0.2720	I
5 Interior Villages	\$0.5219	I
 Customer Charge:	 \$25.50 per month per meter	 I

Reconnection within Ten Months:

If a customer disconnects or is disconnected for any reason and then requests reconnection within ten (10) months of the disconnection at the same location, the customer will be required to pay the Reconnection Charge as stated in Section 12 on Sheet 101, as well as, the Customer Charge per month that would have been due during the period the customer had been disconnected.

Cost of Power Adjustment:

Billings under this schedule will be increased to reflect the weighted average cost of power per kwh sold as calculated in the Schedule No. A-5 for each load center.

Power Cost Equalization Program:

For residential customers, these rates are eligible for power cost equalization in an amount as identified on the tariff sheet for the PCE rates by load center.

5	Interior Villages	\$0.4645		\$55.22	I/I
	Customer Charge:	\$32.02	per month per meter		R

Demand Ratchet:

The billed demand shall be the greater of the maximum monthly demand or 75% of the maximum demand recorded during the preceding 11 months.

Minimum Bill:

The minimum bill charged to customers in this rate class will be the Customer Charge and the Demand Charge applicable for the rate group.

Reconnection within Twelve Months:

If a customer disconnects or is disconnected for any reason and then requests reconnection within twelve (12) months of the disconnection at the same location, the customer will be required to pay the Reconnection Charge as stated in Section 12 on Sheet 101, as well as, all Demand Charges and Customer Charges (minimum bill) that would have been due during the period the customer had been disconnected.

Power Factor Adjustment:

If the average power factor at which power is provided to the customer is less than ninety percent (90%) lagging, the billing demand may be increased by one percent (1%) for each percent or major fraction thereof that the average power factor is less than ninety percent (90%) lagging.

Cost of Power Account

- A. The rate schedules for electric service at each load center (service area) of the company shall be subject to adjustment by the applicable Cost of Power Account set forth in Section E of this schedule.
- B. The Cost of Power Account in Section E of this Schedule reflects the weighted average cost of fuel and purchased energy.
- C. The company shall maintain a Cost of Power Account balance for each load center. The Cost of Power Account balances shall reflect the sum of the debit and credit entries prescribed below.
 - 1. A debit entry equal to the actual cost of purchased power and consumed fuel for each preceeding month.
 - 2. A credit entry equal to the total number of KWH's sold for each load center during that month multiplied by the weighted average cost of power per KWH as computed in section E, line 5.
 - 3. A credit entry equal to the total number of KWH's sold for each load center during that month multiplied by the actual Cost of Power Adjustment assessed.
 - 4. In rate group 3, a credit entry for the revenue related to the actual sales to the National Park Service during the quarterly filing period.

SMALL FACILITY POWER PURCHASE RATE (SFPPR)

This tariff is applicable to the purchase of energy from a Qualifying Facility. A qualifying facility is a co-generation facility or a small power production facility which meets the criteria prescribed by Part 292, Subpart B of the Federal Energy Regulatory Commission Regulations 18 CFR 292.101(b)(1), as effective April 1, 2015, including size, fuel use, ownership, and efficiency standards.

The rate at which the Utility will purchase energy from Qualifying Facilities with a design capacity of 100 kW or less is calculated based upon the number of gallons of diesel consumed in the historical period used in the Cost of Power Adjustment calculation, updated to reflect the current price of the Utility's fuel inventory, divided by the number of kWh generated by diesel in the historical period used in the Cost of Power Adjustment calculation.

This rate will only be applicable when hydroelectric resources are not available.

Schedule No. A-6

SMALL FACILITY POWER PURCHASE RATE (SFPPR)

This tariff is applicable to the purchase of energy from a Qualifying Facility. A qualifying facility is a co-generation facility or a small power production facility which meets the criteria prescribed by Part 292, Subpart B of the Federal Energy Regulatory Commission Regulations 18 CFR 292.101(b)(1), as effective April 1, 2015, including size, fuel use, ownership, and efficiency standards.

Rates: The rates reflected below are based on the cost of energy which APC will avoid by virtue of its interconnection with qualifying facilities.

Rate A:
 This rate shall be effective at all times that energy is available from Goat Lake Hydro, Inc. (GLH) hydroelectric generation sufficient to meet all APC customers' energy requirements. Rate A is set to zero.

Rate B:
 This rate shall be effective when APC is using diesel fuel to generate electricity. However, diesel generation for maintenance and testing purposes of two hours or less per day will not cause this rate to become effective.

The rate at which the utility will purchase energy from Qualifying Facilities with a design capacity of 100 kW or less is calculated based upon the number of gallons of diesel consumed in the historical period used in the Cost of Power Adjustment calculation, updated to reflect the current price of the Utility's fuel inventory, divided by the number of kWh generated by diesel in the historical period used in the Cost of Power Adjustment calculation.

A	Gallons consumed (historical period)		11,466	R
B	Current fuel price		\$ 3.3664	R
C	Total fuel costs	(A x B)	\$ 38,599.14	R
D	Diesel kWh generated (historical period)		114,149	R
E	Small Facility Power Purchase Rate	(C/D)	\$ 0.3381	I

PRINCE OF WALES ISLAND
Schedule No. A-6

SMALL FACILITY POWER PURCHASE RATE (SFPPR)

This tariff is applicable to the purchase of energy from a Qualifying Facility. A qualifying facility is a co-generation facility or a small power production facility which meets the criteria prescribed by Part 292, Subpart B of the Federal Energy Regulatory Commission Regulations 18 CFR 292.101(b)(1), as effective April 1, 2015, including size, fuel use, ownership, and efficiency standards.

Rates: The rates reflected below are based on the cost of energy which APC will avoid by virtue of its interconnection with qualifying facilities.

Rate A:

This rate shall be effective at all times that energy is available from Black Bear Hydro (BBL) and Haida Energy, Inc. (HEI) hydroelectric generation sufficient to meet all APC customers' energy requirements. Rate A is set to zero.

Rate B:

This rate shall be effective when APC is using diesel fuel to generate electricity. However, diesel generation for maintenance and testing purposes of two hours or less per day will not cause this rate to become effective.

The rate at which the utility will purchase energy from Qualifying Facilities with a design capacity of 100 kW or less is calculated based upon the number of gallons of diesel consumed in the historical period used in the Cost of Power Adjustment calculation, updated to reflect the current price of the Utility's fuel inventory, divided by the number of kWh generated by diesel in the historical period used in the Cost of Power Adjustment calculation.

A	Gallons consumed (historical period)		24,809	R
B	Current fuel price	\$	2.9599	R
C	Total fuel costs	(A x B) \$	73,432.16	R
D	Diesel kWh generated (historical period)		295,910	R

 Power Cost Equalization**

The following conditions apply to Power Cost Equalization (PCE) eligibility:

1. Residential customers are eligible for PCE for actual consumption of not more than 750 kWh per month.
2. Customers that are classified as local community facilities are eligible for PCE, calculated in the aggregate for each community served by the utility for actual consumption of not more than 70 kWh per month for each resident of the community.
3. Customers not listed above are not eligible for PCE.

For bills rendered beginning on or after the effective date, the amount of Power Cost Equalization credited to eligible customers will be at the rates listed for each of the Load Centers below.

<u>Rate Group:</u>	<u>Load Center:</u>	<u>Amount Per kWh</u> (100% Funding)	
1	Haines and Skagway	\$ 0.0245	R
2	POW Island Coffman Cove, Craig, Hollis, Hydaburg, Kasaan, Klawock, Naukati, Thorne Bay, Whale Pass	\$ 0.0515	I
3	Gustavus	\$ 0.1719	
4	Tok/Dot Lake/Tetlin	\$ 0.2758	I
5	Allakaket and Alatna	\$ 0.7057	R
	Bettles and Evansville	\$ 0.7608	
	Chistochina/Mentasta/Slana	\$ 0.5400	I
	Eagle and Eagle Village	\$ 0.6049	R
	Healy Lake	\$ 0.7608	I
	Northway and Northway Village	\$ 0.5509	I

AS 42.45.110(i) provides that when appropriations are insufficient for payment in full, the amount paid to each utility is reduced on a pro rata basis. Beginning with that billing period, the amount of PCE to be credited to the bills of all eligible customers will be shown in a separate column above.

OPTIONAL TIME OF USE RATES

Beginning with the January 2025 billing period, where meters are Time of Use capable, retail customers may begin taking service using Optional Time of Use Rates.

Optional Time of Use Rates are available in locations where:

- (1) APC is providing service;
- (2) the customer does not take Net Metering or does not have grid-connected generation or storage equipment;
- (3) energy is not resold, including without limitation resale for electric vehicles;
- (4) a completed election form has been approved by APC; and
- (5) an advanced metering infrastructure (AMI) meter capable of providing interval usage is installed and supported by upstream equipment.

Customers electing to enroll in the Optional Time of Use program shall remain on the service until, at least, the first new billing cycle after enrollment. Customers electing to unenroll in the Optional Time of Use service are prohibited from re-enrolling for 12 calendar months following de-enrollment.

<p>Alaska Power Company</p>		

SECTION 13 - NET METERING SERVICE

(Applicable to Eligible On-Site Generation Systems 25 kW or Less)

Available on a first-come, first served basis to retail customers that operate and own or lease eligible on-site generation system(s) that are interconnected and operate in parallel with the Company's distribution facilities. Generation systems shall contain a nameplate capacity of 25 kW or less per customer premises and be used primarily to offset part or all of the consumer's electric energy requirements.

Service under this schedule is available until the cumulative nameplate generating capacity of all retail net metered systems equals 1.5 percent of the Company's average retail system demand. The Company may limit net metering installations in portions of its distribution system that are reasonably necessary to address system stability constraints or other operational issues.

Monthly Rates

Electric bills for net metered consumers shall be computed in accordance with the applicable retail service rates contained in this operating tariff, with electric energy (kWh) calculated as follows:

- 1) If the Company furnished more electric energy to the consumer than the consumer supplied to the Company during the monthly billing period, the Company shall bill the consumer for the number of kWh of net electric energy supplied by the Company to the consumer at the applicable retail rates contained in the operating tariff; or
- 2) If the consumer supplied more electric energy to the Company than the Company supplied to the consumer during the monthly billing period, the Company shall credit the consumer's account with an amount derived by multiplying the kWh of net electric energy supplied by the consumer to the Company by the Net Metering power rate contained on Tariff Sheet No.'s 118.1, 119.1 and 120.1 as appropriate.

T

Dollar amounts credited to the account of a net metered consumer shall be used to reduce amounts owed by the consumer in subsequent monthly billing periods. Dollar amounts credited do not expire or otherwise revert to the Company. Unused credits will be paid to the consumer in the event electric service is terminated.

Alaska Power Company		

SECTION 13 - NET METERING SERVICE
 (Applicable to Eligible On-Site Generation Systems 25 kW or Less)

Conditions (Continued)

- 8) The Company may request by tariff advice letter to adjust the limit on total nameplate capacity of eligible consumer generation systems participating in the net metering program above 1.5 percent of the electric utility's average retail demand.
- 9) The Company reserves the right to limit net metering installations in portions of its distribution system that are reasonably necessary to address system stability constraints or other operational issues. The Company shall notify the Commission no later than 30 days after refusal to interconnect with a consumer requesting net metering service.
- 10) The Company may require the installation of additional metering equipment for net metering consumers, including the metering of individual generating facilities. For these installations, the Company is responsible for all costs related to the purchase, installation, and maintenance of the additional metering equipment and the customer shall not be assessed any recurring charges for the additional metering equipment. Additional equipment required because of changes in standards or regulation are the responsibility of the customer.
- 11) Pursuant to 3 AAC 50.910 (d), below is a summary of the Company's average retail demand, maximum allowed nameplate capacity of eligible net metered generation facilities on the system, and total nameplate capacity of net metered customers:

	2023	Average	1.5% of	# of	Nameplate	C
<u>Rate Group</u>	<u>Sales (kWh)</u>	<u>Demand (kW)</u>	<u>ARD (kW)</u>	<u>Systems</u>	<u>Capacity (kW)</u>	
RG 1	26,737,871	3,052	45.8	2	14.5	C
RG 2	32,860,295	3,751	56.3	0	0	C
RG 4	10,332,421	1,180	23.4*	4	23.4	C

*1.5% of RG 4's ARD is 17.7 kW. The waiver requested in TA914-2 allows for the higher limit of 23.4 kW. T/C

Each of these rates groups is an independent electrical system and exceed the 5 million sales threshold.

Terms and Conditions

1.0 Construction of the Generating Facility

After APC executes the Interconnection Agreement by signing the Applicant's Net Metering application, the Applicant may construct the Generating Facility, including interconnected operational testing not to exceed two hours.

2.0 Interconnection and Operation

The Applicant may operate the Generating Facility and interconnect with APC's Electric Delivery System once all of the following have occurred:

2.1 The Generating Facility has been inspected and approved by the appropriate local electrical wiring inspector with jurisdiction, and the Applicant has sent documentation of the approval to the Utility, and

2.2 The Utility has either:

2.2.1 Inspected the Generating Facility and has not found that the Generating Facility fails to comply with a Level 1 technical screen or a UL and IEEE standard; or

2.2.2 Waived its right to inspect the Generating Facility by not scheduling an inspection in the allotted time; or

2.2.3 Explicitly waived the right to inspect the Generating Facility.

3.0 Safe Operations and Maintenance

The Interconnection Customer shall be fully responsible to operate, maintain, and repair the Generating Facility as required to ensure that it complies at all times with IEEE Standard 1547.

4.0 Access

APC shall have access to the metering equipment of the Generating Facility at all times. APC shall provide reasonable notice to the Interconnection Customer when possible prior to using its right of access.

5.0 Disconnection

APC may temporarily disconnect the Generating Facility upon the following conditions:

5.1 For scheduled outages upon reasonable notice.

5.2 For unscheduled outages or emergency conditions.

5.3 If the Generating Facility does not operate in the manner consistent with these terms and conditions of the Agreement.

5.4 The Utility shall inform the Interconnection Customer in advance of any scheduled disconnection, or as is reasonable after an unscheduled disconnection.

Alaska Power Company (APC)
Application Net Metering Facility Not Greater than 25 kW

REGULATORY COMMISSION OF ALASKA

6.0 Indemnification

Each Party shall at all times indemnify, defend, and save the other Party harmless from, any and all damages, losses, claims, including claims and actions relating to injury to or death of any person or damage to property, demand, suits, recoveries, costs and expenses, court costs, attorney fees, and all other obligations by or to third parties, arising out of or resulting from the indemnified Party's action or inactions of its obligations under this Agreement on behalf of the indemnifying Party, except in cases of gross negligence or intentional wrongdoing by the indemnified Party.

7.0 Insurance

The Interconnection Customer is required to maintain standard general liability insurance coverage as part of this Agreement and is required to provide proof of insurance. Standard homeowners insurance coverage is defined as coverage sufficient to replace your home and its contents.

8.0 Limitation of Liability

Each Party's liability to the other Party for any loss, cost, claim, injury, liability, or expense, including reasonable attorney's fees, relating to or arising from any act or omission in its performance of this Agreement, shall be limited to the amount of direct damage actually incurred. In no event shall either Party be liable to the other Party for any indirect, incidental, special, consequential, or punitive damages of any kind whatsoever, except as allowed under paragraph 6.0.

9.0 Termination

9.1 This Agreement may be terminated under the following conditions:

9.1.1 By the Interconnection Customer: By providing written notice to APC.

9.1.2 By APC: If the Generating Facility fails to operate for any consecutive 12-month period or the Interconnection Customer fails to remedy a violation of these terms and conditions of the Agreement.

9.2 Permanent Disconnection: In the event the Agreement is terminated, APC shall have the right to disconnect its facilities or direct the Interconnection Customer to disconnect its Generating Facility.

9.3 Survival Rights: This Agreement shall continue in effect after termination to the extent necessary to allow or require either Party to fulfill rights or obligations that arose under the Agreement.

10.0 Assignment

1. For a Generating Facility offsetting part or all of the load of a utility customer at a given site, that customer is the Net Metering Customer and that customer may assign this application / agreement to a subsequent occupant of the site. For a Generating Facility providing energy directly to APC, the Interconnection Customer is the owner of the Generating Facility and may assign this application / agreement to a subsequent owner of the Generating Facility. Assignment is only effective after the assignee provides written notice of the assignment to the Utility and agrees to accept the Interconnection Customer's responsibilities under the Interconnection Agreement.

**INTERCONNECTION REQUIREMENTS FOR
NET METERING POWER PRODUCERS**

This document states the minimum requirements for the safe and reliable operation of Customer-owned generating facilities (25 kW or smaller in size) that will be eligible to be connected and operated in parallel with the ALASKA POWER COMPANY, (APC) utility system under APC's NET METERING Program. Customer-owned generating facilities that are fueled by: (a) Wind; (b) solar energy; (c) geothermal energy; (d) landfill gas; (e) wave or tidal action; (f) gas produced during the treatment of wastewater; (g) qualified hydropower; or (h) biomass energy based on solid organic fuels from wood or field residues, or dedicated energy crops that do not include wood pieces that have been treated with chemical preservatives, are eligible to become NET METERING facilities.

NET METERING facilities shall not be fueled or connected to any non-qualified alternative energy sources.

1. Compliance with Laws. Construction and installation of a NET METERING facilities shall be in compliance with all applicable national, state, and local construction and safety codes. Once operating, APC reserves the right to require the Customer, at the Customer's expense, to provide corrections or additions to their existing protective devices in the event of future modification of government or industry regulations and standards.

2. Placement of Customer-owned NET METERING Facilities. To maintain the existing APC distribution system's power quality and reliability, only one NET METERING facility per distribution transformer will be authorized. This requirement may be waived by APC when APC, in its sole discretion, deems it appropriate under the circumstances.

3. Power Quality and Reliability. The interconnection of the NET METERING facility with the APC utility system shall not cause any reduction in the quality and reliability of service provided to other Customers. There shall be no objectionable generation of abnormal voltages or voltage fluctuations, and the harmonic content of the NET METERING facility output must be below that level which would cause undue interference with other Customer loads, other utilities, or APC facilities and equipment.

To minimize all interference, APC requires the NET METERING facilities to meet the power quality standards presented in Section 10 Recommended Practices for Individual Consumers of the latest IEEE Std. 519, IEEE Recommended Practices and Requirements for Harmonic Control in Electrical Power Systems. In addition, to meeting all requirements identified in this document, the NET METERING facility shall comply with APC's Operating Tariff and IEEE 1547.

4. Testing. Prior to initial energization of the NET METERING facility, inspection and/or tests will be jointly performed by both the Customer and designated APC personnel. Purpose of the testing is to determine if the generator and related equipment

RECEIVED

APR 30 2012

of the NET METERING facility meets the minimum safety requirements described by IEEE 929 and UL 1741 and IEEE1547. Customer is solely responsible for ensuring proper operation of its NET METERING facility. Further tests may be required on individual systems. The Customer is responsible for the costs associated with testing and/or retesting inverters and power generating units that do not meet UL 1741 and IEEE 1547.

5. Inspection and Customer Maintenance Records. The Customer shall maintain the NET METERING facility in good working order. The NET METERING facility (*i.e.*, generator and associated equipment) may be subject to inspection by APC upon reasonable notice, but APC assumes no duty to inspect said facility. The Customer will assume full responsibility for the routine maintenance of the NET METERING facility, associated protective devices, and the keeping of records for such maintenance. These records shall be available to APC for inspection at all times upon reasonable notice to the Customer, but APC assumes no duty to inspect said records.

6. Visible, Lockable Disconnect Switch. An accessible, visible, lockable disconnect switch is to be provided by the Customer in an appropriate circuit which is lockable in the open position only. This switch shall be located at or near the main structure, the utility service entrance, or some mutually agreed upon location with proper signage.

(A) This switch, when locked in the open position for any of the following conditions, may be unlocked only by APC operating personnel. APC will lock open the switch under the following circumstances:

- (a) If it is necessary for the protection of line crew personnel when working on de-energized circuits during a system emergency.
- (b) If inspection of the NET METERING facility reveals a hazardous condition or a lack of proper maintenance.
- (c) If the NET METERING facility interferes with other Customers, other utilities, or with the operation of APC's distribution system.
- (d) If APC determines that the NET METERING facility has generated power from a non-qualified alternative energy resource.
- (e) For general maintenance of APC's distribution system.

The installed switch will be locked open by APC for the above conditions (a), (b), (c) and (d). APC will provide reasonable notice before locking the switch open for general maintenance as provided in condition (e) above.

(B) If the Customer declines to install a Visible, Lockable Disconnect Switch, consent is implied to allow APC Operating Personnel to disconnect all electric service to the entire site, if APC, at its sole discretion, anticipates any of the circumstances (a)-(d) in Section 6(A).

7. Metering. APC shall install and maintain a kilowatt-hour meter, or meters at the NET METERING facility capable of registering the bi-directional flow of electricity at the Point of Interconnection at a level of accuracy that meets all applicable standards, regulations and statutes. The meter(s) may measure such parameters as time of

delivery, power factor, voltage and such other parameters as APC shall specify in its sole discretion. The Customer shall provide space for metering equipment as specified by APC with the location of the meter(s) to be approved by APC.

8. Nominal Voltages and Phasing. The generator nameplate voltage should be the same as one of the nominal voltages supplied by APC. The nominal voltages are 120/240 V single-phase, 120/240 V three-phase, 120/208 V three-phase, and 277/480 V three-phase. If the generator nameplate voltage is different from APC's nominal voltages, the Customer must supply a dedicated generator transformer. The preferred transformer connection, unless otherwise specified, is grounded wye-grounded wye.

9. Fault Current Increase and Upgrading Equipment. In general, installation of a new generator will increase the fault current level at the Customer's electrical facility. This may require upgrading some of the Customer's equipment. The Customer will assume full responsibility of upgrading Customer's own equipment.

10. Starting as Induction Motor. In general, induction generators start as motors and also synchronous generators may be designed to start as motors. The Customer-owned generator starting as a motor shall meet the motor starting requirements prescribed by APC. APC may require the Customer to provide, at Customer's own expense, special or additional starting equipment.

11. Generating Facility Grounding. There are additional safety concerns that should be addressed when considering circuit grounding of the NET METERING facility interconnected to APC's utility system. To ensure proper grounding of the generating facility, the Customer should follow all applicable national, state, and local codes regarding grounding.

12. Synchronization. The NET METERING facility must be synchronized with APC's utility system at all times and the Customer shall be responsible for the cost and maintenance of synchronization.

13. Automatic Disconnection and Time-Delayed Automatic Reconnection. The NET METERING facility shall be designed to automatically disconnect and lockout when APC's service is interrupted for any reason. Automatic reconnection of the NET METERING facility to APC's utility system shall be done only on Hot-Bus/Hot-Line/Sync-Check at least five minutes after the automatic disconnection.

14. Single Phasing Protection. The Customer is advised that a phase-unbalance disturbance on APC's utility system can result in overheating of the NET METERING facility. A negative-sequence-type relay (current or voltage) could be necessary to initiate tripping under phase-unbalance conditions and may also be used to block closing of the automatic reconnection device if APC's utility system is single-phased.

15. Generating Facility Protection. The Customer is fully responsible for the protection of the generator and all of its associated equipment. Protection should be provided for the Customer's own equipment failures, faults and other disturbances on APC's utility

system. The Customer shall provide equipment specifications, protection arrangements and design drawings to APC for review and written approval prior to installation.

16. Fault Detection and Automatic Isolation. To prevent a NET METERING facility from supplying current to a fault on APC's utility system, the NET METERING facility shall be equipped to provide isolation from APC's utility system for any fault on the APC's utility system. The automatic isolation shall be done prior to the APC breaker (or recloser) reclosing and within a reasonable period of time, typically less than two seconds (120 cycles).

17. Under/Over Voltage Relay. To prevent any hazardous operating conditions, the NET METERING facility shall be isolated from APC's utility system for any under-voltage (lower than 80 percent of nominal voltage) and over-voltage conditions (higher than 110 percent of nominal voltage) within two seconds (120 cycles).

18. Under/Over Frequency Relay. To prevent any hazardous operating conditions, the NET METERING facility shall be isolated from APC's utility system for any over-frequency and under-frequency conditions within a reasonable period of time. The Customer's frequency relay settings will be reviewed and approved by APC prior to start-up of the NET METERING facility.

19. No Automatic Reclosing. The APC feeder circuit breaker control scheme is normally designed to have at least one automatic reclosing in order to minimize unnecessarily prolonged outages. To minimize potentially hazardous conditions or equipment damage due to non-synchronized operation caused by automatic reclosing, no automatic reclosing of the NET METERING facility breaker (or interrupting device) shall be allowed.

20. Dedicated Distribution Transformer. To ensure reliable service to other APC Customers and to minimize all possible problems for other APC Customers, the NET METERING facility shall be interconnected to the APC utility system through a dedicated-to-single-Customer distribution transformer. Any cost of new APC facilities to achieve dedicated-to-single-Customer service shall be the Customer's sole expense. This requirement may be waived by APC on a case-by-case basis, when it deems appropriate, in its sole discretion.

21. Single-phase Generating Facility on Three-phase Distribution Transformer. In general, a Customer-owned single-phase generating facility greater than 10kW shall not be allowed to be connected to an APC three-phase distribution transformer. This requirement may be waived by APC on a case-by-case basis, when it deems appropriate, in its sole discretion.

22. Surge Protection. The Customer is responsible for the protection of Customer's NET METERING facility from transient surges initiated by lightning, switching, or other system disturbances.

23. Future Modification or Expansion. Any future modification or expansion of the NET METERING facility will require a separate engineering review and approval by APC.

RECEIVED

APR 30 2012

STATE OF ALASKA
REGULATORY COMMISSION OF ALASKA

24. Reservation of Rights. APC reserves the right to require, in its sole discretion, additional interconnection requirements for NET METERING generating facilities in order to preserve the safety and integrity of APC's utility system.

ATTESTATION:

I, representative of _____, am an authorized (NET METERING Producer) and have read the above Interconnection Requirements for NET METERING Producers, understand the importance of adhering to the requirements, and agree to abide by the requirements set forth herein.
